

## GAC Oil & Gas

James Cumming & Sons Pty Ltd supplies Powdered and Granular Activated Carbons for oil and gas refining, including GAC which meets the strict sizing specifications for the U.O.P. "Merox"® fixed bed sweetening process for the extraction of mercaptans from feedstock.

Other applications include the removal of contaminants from amine and potassium carbonate scrubbing solutions, and from glycol drying solutions, the removal of oil contaminants from process water, ballast water and wastewater treatment, the containment and cleanup of hydrocarbon spills, removal of mercaptan stenchants from air in gas dosing plants, gas purification, odour control, as a catalyst carrier, and for by-product purification.
